INTRODUCTION

Established in 2000 under the name of *Arabian Architecture* .

The corporate is registered in Cairo - Egypt.

We provide the clients with the best Architectural, Planning and

Interior Designs. Bringing together diverse groups of professionals from various fields all interested in studying and working on issues of the built environment.

We develop new designs and structural techniques to improve the quality, safety, and attractiveness of the buildings and settings in which we live, work and play. The scope of our architectural work is very broad. We often work with urban and interior designers, structural engineers, landscape architects and members of other professions to incorporate their efforts into the total building project.

We consider our organization nature as a project organization. We characterize projects by the number of employees needed to perform the tasks, or workload, and the number of tasks that are fundamentally different in nature. Various disciplines perform their own tasks. It is necessary to view the Product Development Process as a process and not as a list of projects. Three important findings regarding this are:

- Projects get done faster if the organization takes on fewer at a time.
- Investments to relieve bottlenecks yield disproportionately large time-to-market benefits.
- Eliminating unnecessary variation in workloads and work processes eliminates distractions and delays, thereby freeing up the organization to focus on the creative parts of the task.

- Creating cross-functional concurrent engineering teams is the right way to develop products.

On a typical day, an architect in our group will:

- Discuss the objectives, requirements, and budget of a project.
- Provide various pre-design services which may include conducting feasibility and environmental impact studies, selecting a site, or specifying the requirements the design must meet.
- Prepare drawings and present ideas for the client to review .
- Develop final construction plans that show building's appearance as well as details for its construction.
- Follow building codes, zoning laws, fire regulations, and other ordinances.
- Make necessary changes throughout the planning process.

In step with technological innovations, ***Arabian Architecture*** staff members are supported by computerized design and drawing facilities, software engineering packages and CAD systems that permit rapid evaluation of potential solutions, immediate modifications and outstanding graphic document. The firm is supported as well by an updated library of standards, design manuals and product catalogues which allow the staff to perform Comparative, Energy Modeling and Analysis, Assessments of Alternative Solutions and Optimization Techniques.

Arabian Architecture staff has significant experience in design and supervision for new and renovated facilities throughout Egypt, KSA and the Middle East, many of which have set strict standards for the consultants to adopt. We have completed numerous projects as the enclosed listing indicates. **Arabian Architecture** effectively plans and designs solutions that fulfill project requirements while minimizing operational costs. The **Arabian Architecture** vast experience and diverse capabilities in this field assures each project is properly planned when completed.

In general, the Services offered by the Arabian Architecture are identified as follows:-

- Architectural & Structural Design
- Interior Design
- Landscape Design
- Construction Documents
- Technical assistance
- Value Engineering
- Systems selection
- Functional layouts
- Cost Estimates
- Coordination with Engineering and Architectural Disciplines.
- Preliminary design and fundamental design drawings.
- Detailed bid drawings and specifications.

Arabian Architecture can offer the integrated solution to the Project covering the following main activities/systems: **Architectural:-**

- Schematic & Conceptual Design Phase
- Design Development
- Structural System
- Construction Documents
- BOQ & Specs

Electrical: -

- Power supply
- Power Distribution
- Lighting
- Fire Alarm
- Telephone system
- Sound system
- Public Address
- Street lighting

Plumbing: -

- Sewage Network
- Water Network
- Irrigation Network
- Drainage Inside Buildings
- Water Supply Hot and Cold

- Ultra Pure Water
- LPG
- Fuel
- Compressed Air and Vacuum
- Medical gases **Fire Fighting: -**
- Fire Fighting Network
- Standpipes
- Sprinklers
- Fire Extinguishers
- Inert gases
- Special fire systems for extra hazardous areas
- HVAC: -**
- Comfort heating and cooling Ø Refrigeration.
- Building Management System
- Kitchen and laundry ventilation
- Clean rooms application
- Industrial ventilation

Special Systems: -

- Swimming Pools
- Decorative Fountains

- Central laundries
- Central kitchens
- Sewage and Water Treatment plants

Assistance: -

- Plumbing concepts evaluation
- HVAC concepts evaluation
- Fire Hazard evaluation and proposal.
- Life Safety
- Elector-Mechanical value engineering.
- Energy analysis and conservation.

Project Management and Site Supervision: - Ø Project quality control.

- Monitor project costs.
- Daily site supervision.
- Approval of shop drawings and material submittals.
- Construction progress control to ensure a timely project completion.
- Monitor site activities and project completion progress.
